

How Registrar Corp Can Help You **COMPLY WITH FSMA**

Food Safety Plans

FDA's Preventive Controls Rules require food facilities to create written Food Safety Plans that identify known or reasonably foreseeable biological, chemical, and physical hazards related to the foods they supply. A Food Safety Plan must include process, food allergen, sanitation, and supply-chain preventive controls and a recall plan. Registrar Corp's Food Safety Specialists can help facilities develop a new Food Safety Plan or review an existing one.

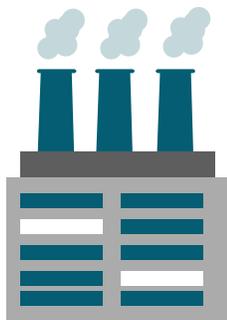

FDA Compliance Monitor

FDA's Preventive Controls and Foreign Supplier Verification Program (FSVP) Rules require food facilities and importers to monitor the FDA compliance status of each supplier, including whether they are the subject of an FDA Warning Letter or Import Alert. Registrar Corp's FDA Compliance Monitor allows users to monitor facilities around the world for FDA Warning Letters, Import Alerts, Import Refusals, and Inspection Classifications. Users receive notifications when a monitored supplier's status changes.

Corrective Actions

Under FDA's Preventive Controls and FSVP Rules, food facilities and importers must implement corrective actions whenever they discover a compliance issue. Labeling violations are one of the most common FDA compliance issues. Registrar Corp's Labeling and Ingredient Review Specialists help assure food labels are FDA compliant. Registrar Corp can also help food facilities with petitions for removal from Import Alerts.

Onsite Audits

One way that importers can verify their foreign suppliers' compliance with FDA food safety regulations (as required by FDA's FSVP rule) is by conducting annual onsite audits. Registrar Corp's Food Safety Specialists can conduct onsite audits of food facilities around the world. Registrar Corp Onsite Audits are typically two days and will help identify potential food safety problems and FDA regulatory compliance issues in the structure, processes, procedures, and documentation used in a facility's daily production.

Compliance Dates

Preventive Controls: September 2016
Foreign Supplier Verification Program: May 2017
